Lab 1 — Semantic HTML Scaffold

Before you design your own CV in Assignment 1, practice the raw skeleton: build a semantic HTML5 skeleton (no styling required) for a generic e-commerce homepage — correct `<header>`, `<nav>` with at least 4 links, a `<main>` containing three `<section>`s (featured products, categories, newsletter signup), and a `<footer>` with at least three columns of links. Validate your HTML with the [W3C Validator](#) and include a screenshot of a clean validation result in your completion PDF.

Document checking completed. No errors or warnings to show.

Used the HTML parser.

Total execution time 8 milliseconds.

Code:

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1.0" />
    <title>ShopEase - Online Store</title>
  </head>
  <body>
    <header>
      <h1>ShopEase</h1>
      <nav>
        <ul>
          <li><a href="#">Home</a></li>
          <li><a href="#">Shop</a></li>
          <li><a href="#">About</a></li>
          <li><a href="#">Contact</a></li>
        </ul>
      </nav>
    </header>
